WITH OUR  
EQUIPMENT

## Start-Up Service

To ensure your DataTanks function properly and efficiently, we strongly recommend that a LiquidStack Field Service Technician perform Start-Up after the equipment has been installed, wired and plumbed. Our technicians follow prescribed checklists to ensure all equipment – including all electrical components, mechanical components, sensors and controls – function according to operational parameters before it is commissioned or becomes fully operational.

As a bonus, when you purchase Start-Up Service, LiquidStack extends the original equipment Limited Warranty by 1 year!

## Installation Supervision

LiquidStack technicians provide on-site supervision of DataTank installation in your facility. This service ensures that the site has been properly prepared for installation using prescribed installation procedures and best practices. It includes verification of wiring, mechanical piping, unions/joints, networking and electrical input power connections, as well as filling of dielectric fluid and close-out inspection.

Installation Supervision Services streamline the installation process and prepare you for the transition to equipment start-up.
